1	Data Structures	3	0	0	3	70	5	5	10	10	-	-	-	-	-	100	3	-

Course Outcomes:

CO1	Define and classify various data structures, storage structures and common operations on them	
CO2	Create various linear data structures with their representation and perform different operations on them	
CO3	Create various nonlinear data structures with their representation and perform different operations on them	
CO4	Apply various searching sorting techniques on data set and compare them	
CO5	Solve the given problem using an appropriate data structure to achieve optimal performance and compare its performance with other possible data structures	

Content of the Course

Module	Contents/ Topics to be covered	Hours
Module - 1	Introduction to Data Structures Types of data structure. Linear and non-linear, Data types – Primitive and Non-Primitive, Application of data structure, Performance Analysis and Measurement (Time and space analysis of algorithms-Average, best and worst case analysis),	04
Module - 2	LINEAR DATA STRUCTURE Array: Representation of arrays, Applications of arrays, sparse matrix and its representation Stack and Queues Introduction of stack, Operations on stack, Applications of stack, Polish Expression, Reverse Polish Expression And Their Compilation, Infix to postfix conversion and Evaluation of postfix expression, Recursion implementation, Tower of Hanoi Queue: Representation Of Queue, Operations On Queue, Circular Queue, Priority Queue, Array representation of Priority Queue, Double Ended Queue, Applications of Queue Linked List Overview of linked list, Dynamic memory allocation, Linked list operations: Insert node, Delete node, Search node, traversal, copy linked list, merge linked list Types of linked list: Singly, Circular, Doubly, Sorted. Application of linked list, Introduction to object oriented programming through stacks, queues and linked lists	13
Module - 3	NONLINEAR DATA STRUCTURE Tree: Tree: Introduction to tree, Representations of tree, Properties of trees, Binary tree, Binary tree representation, Binary tree properties, Binary tree traversals (inorder,preorder,postorder), Binary tree implementation, Threaded Binary Tree, Binary Search Tree, Conversion of General Tree to Binary Tree, Application of trees, Balanced tree mechanism, AVL Tree, 2-3 trees, Height Balance, Weight balance Graphs: Introduction to graph, Representation of Graphs, Breadth first search and Depth first search in directed and undirected graph , Spanning tree, shortest path, minimal spanning tree	13
Module - 4	Sorting and Searching Time and space complexity, Introduction to sorting, Selection sort, Bubble sort, Insertion sort, Merge sort and Quick sort Sequential Search, Binary Search, Comparison of sorting and searching methods	07
Module - 5	HASHING AND FILE STRUCTURES Hashing: The symbol table, Hashing Functions, Collision Resolution Techniques, File Structure: Concepts of fields, records and files, Sequential, Indexed and Relative/Random File Organization, Indexing structure for index files, hashing for direct files, Multi-Key file organization and access methods.	08

Textbooks

1	An Introduction to Data Structures with Applications. by Jean-Paul Tremblay & Paul G. Sorenson Publisher Tata McGraw Hill
2	Data Structures using C & C++, Ten Baum, Prentice-Hall International
3	Fundamentals of Data Structures in C, 2nd Edition, E.Horowitz, S.Sahni and Susan Anderson-Freed, Universities Press.
4	Data Structures A Programming Approach with C, D.S.Kushwaha and A.K.Misra, PHI
5	Data Structure using C, Third edition, 2012, Reema Thareja, Oxford University press
6	Fundamentals of Computer Algorithms, 2001 edition, Horowitz, Sahni, Galgotia

List of Experiments

Name of Laboratory: Data Structures Laboratory				
List of practical/ Experiments				
Sr No	Objective			
1	Implement a program to insert, delete and search an element from array.	YES	-	-
2	Introduction to pointers. Call by Value and Call by reference	YES	-	-
3	Implement a program for stack that performs following operations using array. a. PUSH b. POP c. PEEP d. CHANGE e. DISPLAY	YES	-	-
4	Implement a program to convert infix notation to postfix notation using stack	YES	-	-
5	Write a program to implement SIMPLE QUEUE and CIRCULAR QUEUE using arrays that performs following operations: a. INSERT b. DELETE c. DISPLAY	YES	-	-
6	Write a menu driven program to implement following operations on the singly linked list. a. Insert a node at the front of the linked list. b. Insert a node at the end of the linked list. c. Insert a node such that linked list is in ascending order d. Delete a first node of the linked list. e. Delete a node before specified position. f. Delete a node after specified position.	YES	-	-

7	Write a program to implement following operations on the doubly linked list. a. Insert a node at the front of the linked list. b. Insert a node at the end of the linked list. c. Delete a last node of the linked list. d. Delete a node before specified position	YES	-	-
8	Write a program to implement following operations on the circular linked list. a. Insert a node at the end of the linked list. b. Insert a node before specified position. c. Delete a first node of the linked list. d. Delete a node after specified position.	YES	-	-

HoD Director Dean

DRS. KIRAN & PALLAVI PATEL GLOBAL UNIVERSITY, VADODARA (KPGU)

9	Write a program which create binary search tree and implement tree traversing methods in order, preorder and post-order traversal.	YES	-	-
10	Write a program to implement Following sorting algorithm a. Bubble b. Merge c. Quick			
11	Write a program to implement Binary search algorithm.			
12	OEP	YES	-	-

HoD Director Dean
